CHI SIAMO | WHO WE ARE

Lavoriamo per sviluppare prodotti performanti, affidabili e semplici da usare, che possano contribuire a rendere più semplice il lavoro degli installatori e degli agricoltori. Siamo presenti con la nostra ampia gamma in tre settori: **irrigazione, acqua & gas, drenaggio.**

We work to develop high-performance and simple-to-use products that can help make the work of installers and farmers easier. We are active in three sectors: **irrigation, water and gas, and drainage.**

INNOVAZIONE INNOVATION

68% del fatturato proviene da **prodotti lanciati o rinnovati** negli ultimi 5 anni
68% of our turnover comes from **products launched or renovated** in the last 5 years

QUALITÀ QUALITY

13 certificati internazionali e severi test di laboratorio
13 international certificates and strict laboratory tests

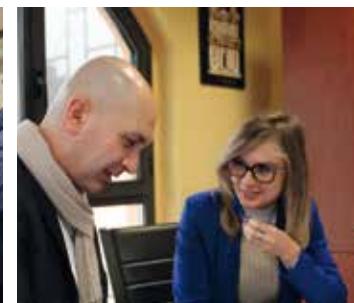

AFFIDABILITÀ RELIABILITY

72% del fatturato viene realizzato con **clienti fedeli da oltre 10 anni**
72% of our turnover has been achieved with **customers loyal for over 10 years**

SOSTENIBILITÀ SUSTAINABILITY

Certificazione Internazionale Ecovadis
Ecovadis international certification - silver medal

System Group è uno dei principali gruppi italiani ed europei nella fornitura di soluzioni per la costruzione di reti interrate per il convogliamento di fluidi e protezione cavi mediante tubi, raccordi e componenti in PE, PP e PVC. Il gruppo nasce nell'entroterra pesarese dall'idea dell'imprenditore Alvaro Boscarini che nel 1979 fonda Centraltubi. System Group ha una struttura capillare e integrata e supporta i suoi clienti nella progettazione, consulenza e nella fornitura di soluzioni tecniche innovative.

Codice Etico e Bilancio di Sostenibilità System Group

Tutte le Aziende di System Group seguono i principi e le indicazioni, soprattutto per quanto riguarda i valori etici e morali nella conduzione del business, sanciti nel Codice Etico di Gruppo.

System Group ha presentato il Bilancio di Sostenibilità, che riunisce, a livello di principi generali, tutte le Aziende del Gruppo, e che prevede, per alcune di esse, la redazione del Bilancio secondo i GRI Standard 2021, certificato da ente terzo accreditato, per rendicontare agli stakeholders i propri impatti economici, ambientali e sociali (ESG) e definire le proprie strategie sulla sostenibilità d'impresa.

System Group is one of the leading Italian and European groups in the supply of solutions for underground networks involving fluids and cable protection by means of pipes, fittings and components in PE, PP and PVC. It was created in a small town inland of Pesaro (ITALY) as a result of an idea by entrepreneur Alvaro Boscarini who, in 1979, had founded Centraltubi. Having a diffuse and integrated structure, System Group supports its customers in the design, consultancy and supply of innovative technical solutions.

System Group Code of Ethics and Sustainability Report

All System Group companies follow the principles and guidelines, especially with regard to ethical and moral values in the conduct of business, enshrined in the Group's Code of Ethics.

System Group has presented the Sustainability Report, which brings together, at the level of general principles, all the Companies of the Group, and which envisages, for some of them, the preparation of the Report according to GRI Standard 2021, certified by an accredited third party, in order to report to the stakeholders on their economic, environmental and social (ESG) impacts and to define their strategies on corporate sustainability.

Installazione

Installation / Installation / Instalacion

Il sistema Canyon è composto da singoli elementi, collegabili fra loro tramite incastro manuale. L'aggancio avviene calando l'elemento superiore su quello inferiore. Il sistema di aggancio a perni consente una rotazione degli elementi da +20° a -20° rispetto l'asse mediano, consentendo adeguare il canyon alla pendenza del terreno dove viene posato.

The Canyon system is made up of individual parts which can be connected together by hand, placing the upper part over the lower one. The jointing system, carried out by means of cylindrical pins, allow the parts to rotate from +20° to -20°, thus allowing the channel system to follow the slope of the land.insertar el accesorio.

Le système Canyon est composé d'éléments singuliers qui sont connectés entre eux à travers d'un ancrage manuel, en mettant l'élément supérieur sur celui inférieur.
Une rotation des éléments est faisable de +20° à -20°, cela permet d'adapter la pose du système aux variations angulaires du plan de pose.

El sistema Canyon está compuesto por elementos singulares que se conectan entre ellos por medio de conexión manual, bajando la borateja superior sobre la inferior.

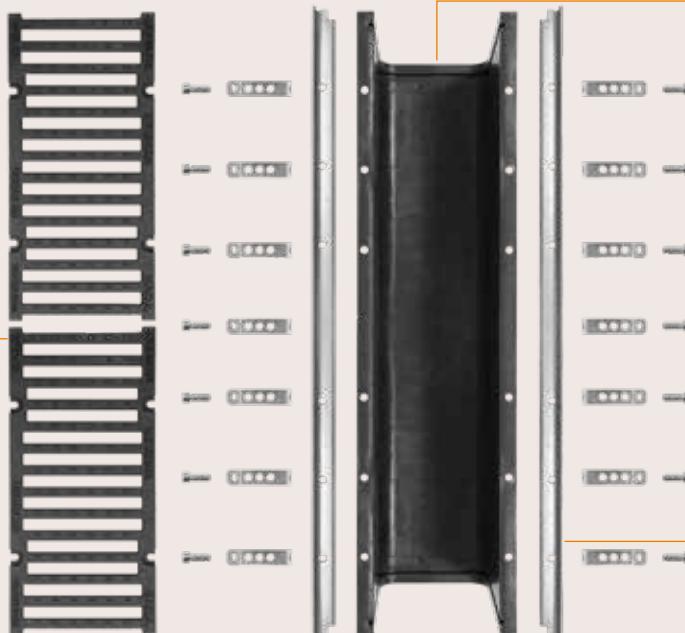

Los pernos cilíndricos permiten una rotación de los elementos desde +20° hasta -20° respecto al eje mediano, permitiendo de adaptar la instalación a las variaciones de la inclinación del terreno.

Componenti Components

Canale
Channel
Caniveau
Canal

Viti e zanche
Screws and anchors
Vis et agrafes
Tornillos y anclajes

Profili di rinforzo
Reinforcing steel rail
Cornière en acier
Borde de protección

Montaggio del canale

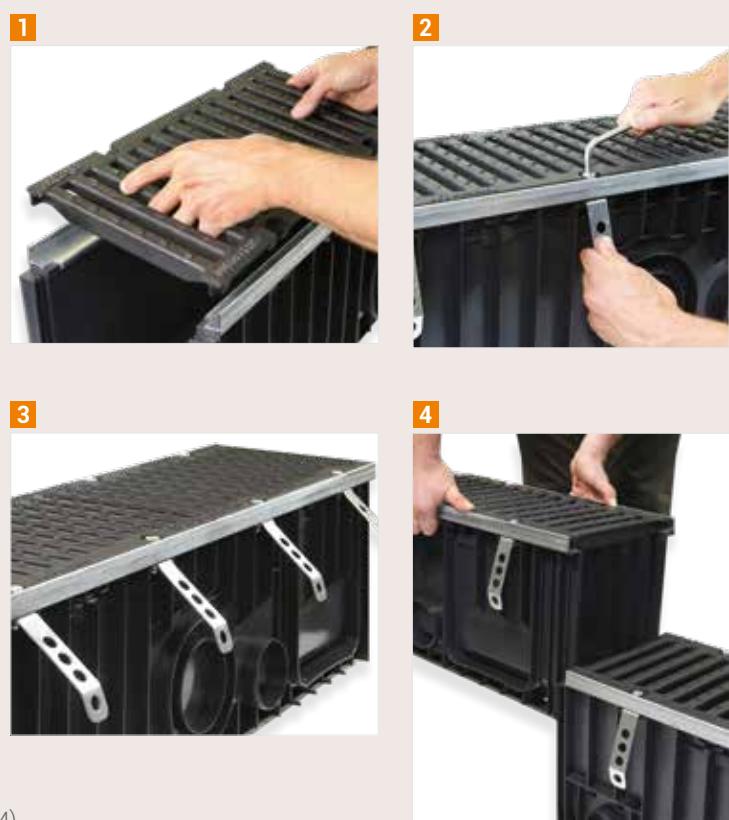

Assembly of the channels

- A - **Inserire i profili di rinforzo di metallo, piazzare le griglie (1)**
- B - **Avvitare e serrare viti e zanche (2), allargare le zanche a 45° (3)**
- C - **Assemblare fra loro i canali per il tratto che si desidera posare, ogni canale va inserito nel successivo fino a far scattare il dente di battuta (4)**

- A - **Insert the metal reinforcing rails, assemble the grids (1)**
- B - **Screw and tighten the screws and anchors (2), widen the anchors to an inclination of 45° to the channel (3)**
- C - **Assemble the channels together for the length desired. Every channel must be inserted into the next one all the way until the lip snaps into place (4)**

- A - **Insérer les cornières en acier, placer les grilles (1)**
- B - **Visser et serrer les vis et agrafes (2), écarter les agrafes à 45° par rapport au caniveau (3)**
- C - **Assembler les caniveaux entre eux pour la longueur voulue. Chaque caniveau est emboité de manière à ce que ce dernier soit cliqué (4)**

- A - **Insertar los perfiles metálicos de refuerzo colocar las rejillas (1)**
- B - **Atornillar para sujetar las pestañas de sujeción (2), poner los anclajes a 45° (3)**
- C - **Ensamar los diferentes canales entre ellos en el tramo que se desea instalar, cada canal viene insertado al siguiente hasta hacer saltar la pestaña de tope (4)**

Installazione

Installation
Installation
Instalacion

- A - Effettuare lo scavo a trincea di dimensioni adeguate (1), compattare il fondo.
- B - Gettare il letto in calcestruzzo di spessore adeguato (2).
- C - Posare i canali (3).
- D - Rinfiancare i lati del canale con idoneo calcestruzzo (vedi composizione del calcestruzzo) dello spessore indicato nelle tabelle di posa (4), il calcestruzzo deve essere vibrato e rinzaffato con estrema cura, deve riempire tutti gli interstizi ed essere compatto sotto i bordi del canale (5). Nelle classi di carico più elevate (E600 F900) è consigliabile un'armatura di ripartizione dei carichi.
- E - Quando il calcestruzzo si è solidificato procedere alla stesura della pavimentazione finale in asfalto, massetto o pavé, in questa fase è consigliabile coprire le griglie con della pellicola per evitare di sporcarle.

- A - Dig the trench of the proper size (1), the land shall be well pressed .
- B - Lay a bed of concrete of the recommended thickness (2).
- C - Lay the channel on the ground (3).
- D - Apply a lateral backfill onto the channel with suitable concrete and thickness as recommended. (4) the concrete should be vibrated and rendered and it should fill in all interstices, in particular behind the support edgings of the grids (5). For the heaviest load classes (E600, F900) we suggest reinforcing the concrete with steel rods for better load distribution.
- E - When the concrete is solidified it is possible to proceed with the flooring in asphalt, tiles or paving. During this step is recommended to cover the grids with a plastic film in order not to dirty them.

- A - Effectuer le creusement de tranchée avec les dimensions adéquates (1). Le fond doit être compacté.
- B - Couler le lit en béton d'une épaisseur adéquate (2).
- C - Poser les caniveaux (3).
- D - Remblayer les côtés du caniveau avec du béton (voir composition du béton) de l'épaisseur indiquée dans le tableau de pose (4), le béton doit être vibré et crépi avec soin, il doit remplir tous les interstices et être compact sous les bordures de caniveaux. Pour les classes de charges les plus élevées (E600 F900), il est conseillé une armature de répartition des charges (5).
- E - Quand le béton est solide procéder au dallage final en goudron, petit rocher ou pavé. A cette phase, il est conseillé de couvrir les grilles avec une pellicule pour éviter de les salir.

- A - Efectuar la excavación de la rasa con las dimensiones adecuadas (1), el lecho se debe compactar.
- B - Pavimentar el lecho con l'hormigón con un espesor adecuado (2).
- C - Posicionar los canales (3).
- D - Falcar la parte lateral de los canales con el hormigón adecuado (ver composición del hormigón) del espesor indicado en las tablas de instalación (4), el hormigón tiene que ser vibrado y reforzado con extrema delicadeza, debe llenar todos los espacios y en especial debajo de los bordes del canal (5). En caso de cargas externas elevadas (E600 F900) es aconsejable una armadura de repartición de la carga.
- E - Cuando el hormigón esta fraguado se procede al extendido de la pavimentación final en asfalto, bordillo o adoquines, en esta fase es aconsejable cubrir la rejilla del canal con un manto de plástico o similar para no ensuciarla.
